

Tasks

TODO

- ☒ Remove `getLoginUrl()` OAuth portal integration (`VITE_OAUTH_PORTAL_URL/VITE_APP_ID`) from the legacy SPA
- ☒ Remove redirect-to-login behavior from `client/src/main.tsx` (React Query cache subscribers)
- ☒ Remove `useAuth` hook usage and all 'Sign In Required' gates/links in `pages/layout`
- ☒ Remove any Manus-specific login UI components (e.g., `ManusDialog`) if unused after auth removal
- ☒ Validate: `pnpm dev:ui` renders; `pnpm build:ui` succeeds; key routes load against Go backend (note: `build+tsc` pass; `dev server bind` fails here with `EPERM`)
